

Aging may bring with it limitations to one's independence. Wandering and disoriented patients & residents can come to harm if they go astray, but limiting their freedom can cause unnecessary stress and anxiety – in addition to loss of dignity. SafeGuard gives patients freedom while you keep a virtual eye on them – making sure they don't get into harm's way in a gentle and respectful manner. SafeGuard offers easy installation, is simple to learn, and easy to use. It provides you with configurable alarms, and notifies your staff of events wherever they may be – at a desk or on the move.

Patient/resident tags are smaller than any others available, and designed to be removed only by qualified staff. So while they are unobtrusive and comfortable, they also give you peace of mind. The system uses existing 802.11 and Ethernet networks, so there are no expensive built-outs or wiring needed. The user-friendly graphical user interface includes wizards to help staff and system administrators use the application with ease, making configuration, training and ongoing use quick and painless.

#### **SafeGuard - The only choice for:**

- Uncompromised patient/resident security
- Dependable and hassle-free
- Smallest active tag available
- Affordable AND full-featured
- Easy and quick installation
- Modular for easy expansion
- Simple to use for end-users and system administrators
- Wireless interfaces to all types of communications devices
- Customizable notifications of alerts and alarms
- Large database for evaluating activities and events with custom reports
