

TOTGUARD™

INFANT SECURITY SYSTEM

NOTHING EVEN COMES CLOSE!

“As a leading provider of post partum care, we use not only the most comfortable infant security for our Moms and Tots, but also the most reliable system.” - Sherry Schacke, Director of the Mother Baby Unit, Athens Regional Medical Center, GA

TotGuard™ system benefits include:

- **Secure and reliable system** – the fully supervised system proactively protects patients in your care
- **Advanced user interface** – easy to learn, and simple to use shortening staff training
- **Smallest tags in the world** – easy to apply and comfortable for your infants
- **Disposable tags** – Available in Umbilical or Patient formats to support your infectious control measures
- **Unique Tamper Sensing Umbilical Tag** – patented tag mounts to standard umbilical clamp within a disposable Encasement to reduce false alarms and provide a sanitary environment
- **Dual tamper tags** – patented dual-tamper detection prevents unauthorized removal, and minimizes nuisance alarms
- **Mother / Baby Bonding** – reduces mother-baby mix-ups, protecting infants from potential hazards
- **Video Surveillance integration** – provides you with a local and remote video stream of the alarmed location, reducing staff time
- **True IP based system** – lowers your implementation and support expenses, while providing a Microsoft standards-based platform for expansion

GuardRFID's TotGuard Infant Security System and its components conform to the UL-294 Standard

BY GUARD RFID SOLUTIONS

Ensuring that newborn patients are well cared for means doing more than just delivering quality patient care. It also means providing them with a safe and secure environment. Along with your standard security procedures and resources, a TotGuard™ solution will protect these tiny patients using the latest in RFID technology. TotGuard™ actively monitors and instantly notifies you of any alerts and alarms triggered by the TotGuard™ tags. TotGuard™ integrates with Video Surveillance systems giving instant visibility of activity at an alarm location.

TotGuard™ tags are the smallest active tags on the market, making them safe, comfortable and easy to apply to the tiniest of infants. You have the flexibility and choice of selecting tags that best suit your operational and budgetary needs. These include the fully supervised **Dual Tamper Infant Tag**, **Umbilical Tag** or the unique **Tamper Sensing Umbilical Tag**.

With TotGuard™ you can even mix tag types, and include standard **Patient Tags** for your pediatric applications, and **Article Tags** for tracking, locating and protecting your equipment. Avoid mother-baby mix-ups using our **Mother Tag**, which enables the system to notify you if the wrong tagged Infant approaches a tagged Mother.

TotGuard™ is fully IP based, with a choice of wired Ethernet (supporting PoE) or 802.11b. This eliminates the need for special cabling; minimizing your total cost of ownership, while allowing for enterprise-wide remote monitoring, diagnostics and system updates.

When you select TotGuard™ you can be confident that you have made the right choice to keep your most vulnerable patients safe and secure, and that you have purchased a system that will grow with your security tracking requirements.
