

Enhanced Access Control

Lenel's OnGuard™ with Active RFID
Taking Access Control to the next level

Hands-free Access Loss Prevention

Total Visibility

Detect personnel at doors, when entering areas, and track throughout your facility

Accountability

Accurate enumeration of all badged personnel even when tailgating

Loss Prevention

Secure tagged assets by controlling their movements through portals

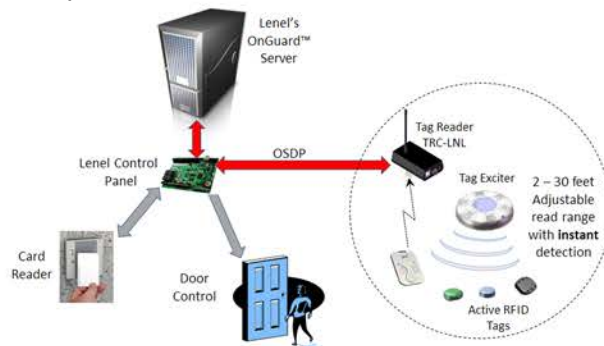

New Dimension in Access Control:

Providing hands-free Access control, Loss Prevention, Unprecedented Visibility of Badged Personnel

Proximity card access control requires cards be presented very close to a reader to identify cardholders. Personnel that are tailgating are also not detected. These limitations in range and visibility mean proximity card access control has limited utility. GuardRFID active RFID tags and readers can solve many access control challenges where long range may be necessary and where accurate detection and personnel enumeration is required. GuardRFID active RFID tags can be placed almost anywhere on a person or object enabling hands-free identification and authentication.

GuardRFID active RFID portal detection delivers reliable detection of all badged personnel passing through a door or gate offering both hands-free access control and reliable personnel accountability. The fully automatic identification through long-range detection solves the issues associated with tailgating. This also allows tags to be placed on assets, equipment, and inventory so that their movement can be monitored and effective loss prevention can be implemented

Take your access control to the next level with GuardRFID's Active RFID technology for Lenel's OnGuard™ system.

Advantages

- Hands-free Access Control - Tag detection range adjustable between 2-30 ft.
- 100% Detection of all Tagged Personnel even if tail-gating.
- Tag valuable assets to prevent losses.
- Equip Muster Stations to enable automatic roll-call.
- Enable functionality such as Visitor Management and Guard Tour systems.
- Achieve enhanced Tracking and Location by adding GuardRFID's AllGuard system.
