

Healthcare

GuardRFID is a proven expert in interoperable real-time location systems (I-RTLS™) driving the next generation of security & compliance applications in healthcare, industrial & commercial environments.

Industrial

With indoor & outdoor installations around the world, GuardRFID helps organizations achieve the protection, compliance, & efficiencies they require when it comes to their people & assets - today & tomorrow.

Commercial

allguard

real-time location

AllGuard is the most robust multi-purpose real-time location platform offering superior flexibility, interoperability & performance.

real flexibility

- Widest range of “Pick-N-Go” applications
- Security, safety, compliance & I-RTLS all in one integrated system
- Widest range of the smallest, toughest, longest-lasting tags
- Both long-range location & instant choke point detection

real interoperability

- Unparalleled standards compliance & certification
- Ready-to-go integration with complementary systems (e.g. CCTV, Access Control)
- An easy-to-work-with API

real performance

- Strongest immunity to wireless interference
- Proprietary location algorithms for the ideal balance of accuracy & cost
- Proven for high-density tag deployments with very fast system response & virtually unlimited potential for system expansion

real-world, real-time location in action

1

REMOTE EQUIPMENT SITE

Real-time solar-powered, fully wireless inventory tracking & loss prevention

CHALLENGE

To improve real-time visibility of heavy industrial equipment inventory, to reconcile leased & returned equipment & to prevent equipment theft & loss at a remote site lacking local power & connectivity.

SOLUTION

AllGuard Asset Tracking & Security with solar-powered wireless Active RFID tag readers & exciters.

2

OIL & GAS SITE

Real-time personnel safety & mustering

WHY GUARDRFID?

Previous passive RFID system testing had failed & they required coverage in challenging remote locations.

IMPACT

Accurate, real-time equipment visibility, retrieval & protection & most recently, a \$450,000 bulldozer was prevented from leaving the work yard without authorization.

CHALLENGE

To quickly & accurately locate & account for thousands of workers during an emergency event & to see how quickly work zones empty during an evacuation.

SOLUTION

AllGuard Personnel Accountability with Active RFID tags attached to hard hats, a mandatory requirement for every worker entering the site. Gathered tag data was then linked to the company's own enterprise resource planning (ERP) software.

WHY GUARDRFID?

Long-range location & instant choke point detection in a single system, widest range of tag types durable enough to withstand -40 degree temperatures & flexibility to move hardware & add applications as needed.

IMPACT

Achieved near 100% detection accuracy & other industrial organizations in the region have now adopted AllGuard.

3

8-ACRE CABLE REEL YARD

Real-time yard inventory visibility & advanced security

CHALLENGE

To gain accurate, real-time cable reel inventory information in their 8-acre yard & to prevent regular misplacement & theft.

SOLUTION

AllGuard Yard Management designed explicitly for harsh environments with the ideal balance of location accuracy & cost from site to site.

WHY GUARDRFID?

Long-range location & instant choke point detection in a single system plus almost indestructible asset tags and infrastructure equipment.

IMPACT

Immediate return on investment by virtually eliminating inventory theft after the system was deployed in 2010.
